

Safety

OSHA regulations require companies to have documented policies, procedures, forms, training, and other items in place to ensure that sources are keeping their employees safe. Once a health and safety program has been developed, many of those documents will also need to be reviewed and/or updated periodically, some annually, some less frequently, some maybe even more frequently as regulations change.

ERI Solutions, Inc. (“ERI”) develops and maintains customizable safety and health programs for a variety of different industries. The programs deliver safety policies, training, self-audits, written plan templates, a program guide, health bulletins, employee handbooks, safety audits, industry loss information as well as research and compliance analysis to ensure your company has the safety & health tools it needs to operate efficiently and safely. Program materials are written in plain, easy-to-understand language, in English; and will be delivered via electronic format through the ERI Knowledge Base web portal. Printed materials, as well as materials in a second language, are available for an additional fee.

We understand that often-times, a universal approach to safety & health just doesn’t work. Because of that, we deliver site specific services.

AREAS OF SERVICE INCLUDE:
